# 1. Executive Summary

#### 1.1 Introduction

This document presents the consolidated Pillar III disclosures of WiZink Bank S.A.U. (the Group) as of 31 December 2019.

Pillar III requirements are set out under the Capital Requirements Regulation (CRR) and are designed to promote market discipline through the disclosure of key information around capital, risk exposures and risk management. Those requirements are similarly adopted by Bank of Spain in the law 10/2014. In June 2019 it was published the update on the regulation (CRR II) which will be fully applicable in June 2021 except for some specific requirements which will have a different entry date.

WiZink Group declares it has not omitted required information for reasons of confidentiality or because the information is reserved.

A table setting out how the Group complies with the CRR disclosure requirements is shown in Appendix 7.

Where appropriate, cross references have been made to supporting disclosures that are included within the 2019 WiZink Bank S.A.U. consolidated Annual Accounts. As such, these disclosures should be read in conjunction with that document.

## 1.2 Key ratios

The key regulatory ratios of the Group are shown below:

#### Table 1: Key ratios

	2019
Common Equity Tier 1 (CET1) ratio phase-in	14,32%
Common Equity Tier 1 (CET1) ratio fully loaded	12,14%
Leverage Ratio phase-in	10,53%
Leverage Ratio fully loaded	8,87%
Liquidity Coverage Ratio (LCR)	2288%
Net Stable Funding Ratio (NSFR)	113%

In 2019 the Group incurred losses amounting 287M€ due to two one-offs; (i) extraordinary provisions due to litigation risks for an amount of 210M€ and (ii) the write-off of goodwill and other intangibles with an impact of 324M€ (with a neutral impact from a solvency perspective). Those adjustments also generated the recognition of 96M€ in DTAs. Without these two impacts the Group would have recorded a profit before tax of 145M€.

The Group's Sole Shareholder, Aneto, agreed to voluntarily increase the Bank's reserves, within the next months, in an amount equivalent to the interim dividend distributed by the Bank on 1 August 2019 which amounted to €18,500 thousand. Considering this, the CET1 Ratio would be 14.86% (Phase-In) and 12.69% (Fully-loaded). This increase was completed in May 2020.

Since December 2019 CET1 phase-in is considered including the transitional arrangements due to IFRS9 capital impacts following the recommendation of ECB and BoS due to the current uncertainty on the macroeconomic scenario.

Pular

The capital requirement as of 31 December 2019 comprised Pillar I/conservation buffer. The 14.32% is over the Group's regulatory requirement

The leverage ratio phase-in was 10.53% at the end of the year and the Group's liquidity coverage ratio (LCR) of 2288% both significantly above the regulatory minimum.

All the key ratios above mentioned are within the Group's risk appetite, which is the amount and type of risk that the Group is prepared to seek, accept or tolerate. The Group's strategy is developed in conjunction with risk appetite.

More information and detail may be found on the 2019 WiZink Bank S.A.U. consolidated Annual Accounts.

#### 1.3 Significant events during 2019

The only significant corporate transaction in 2019 was the merge of Wizink Bank, S.A.U. and Wizink Mediador Operador Banca Seguros Vinculado S.A.U.

On 30 May 2019, the Boards of Directors of WiZink Bank and WiZink Mediador Operador Banca Seguros Vinculado, S.A.U approved a 'Common Merger Project', which in compliance with Article 29.1 of the Structural Changes Act, passed by Royal Legislative Decree 3/2009, of 3 April, established the basis and criteria under which the companies merged, with WiZink Bank absorbing WiZink Mediador Operador.

The main objectives of the merger are: (i) to simplify the current corporate structure, thereby removing management, structural, administrative, commercial and accounting costs; (ii) to ensure more efficient business management, administration and control; and (iii) to generate positive synergies.

The merger date for accounting purposes was 1 January 2019, in accordance with the applicable financial reporting framework. The merger by absorption of WiZink Mediador by WiZink Bank has had no impact on the consolidated annual accounts, except for the removal of WiZink Mediador from the consolidation perimeter, with effect from 1 January 2019.

# 2. Disclosure policy

## 2.1 Basis of preparation

This document contains the consolidated Pillar III disclosures of the Group as at 31 December 2019, prepared in accordance with the requirements of Part Eight of the Capital Requirements Regulation (EU Regulation 575/2013, the CRR). It is also consistent with the requirements outlined in law 10/2014 for the local framework.

Pillar III disclosures reflect the Group's adoption of the Standardised Approach to quantify RWAs for credit risk and Operational Risk. The group does not use any Internal Ratings Based or advanced approaches for the quantification of RWAs for Pillar I requirements.

The information disclosed is focused on the aspects considered as relevant for an adequate understanding of the risk profile of the group; its exposure to risks and its management structure.

Though the Pillar 3 Disclosures include the whole WiZink Group. The policies are applicable to WiZink Group, although work is being done to adequately integrate the possible specificities of Aplázame; which, nevertheless, is not a material entity from the prudential perspective for the Group.

# 2.2 Frequency, media and location

The Group's policy is to publish the required disclosures on an annual basis. The Pillar III disclosures are published in the company's website www.wizink.es.

The frequency of disclosure will be reviewed should there be a material change in any approach used for the calculation of capital, the business structure or regulatory requirements.

#### Verification

The Group's Pillar III disclosures have been reviewed through the internal governance procedures applicable to all external reporting, including review by Internal Audit and the Audit Committee and approval by the Board of Directors.

#### 2.3 Risk profile disclosure

In accordance with Part Eight of the CRR, the Group is required to assess whether its external disclosures portray its risk profile comprehensively (see sections 4, and 8 for more detail). The disclosures of risk management objectives and procedures within this Pillar III document are detailed fully within the WiZink Annual Accounts (section 45 risk exposure and management)

#### 2.4 Current developments

Phase 1 of the revised Pillar III framework of the Basel Committee on Banking Supervision (BCBS) was addressed by the EBA in guidelines implemented in December 2017. The guidelines introduced more specific guidance and prescribed tables and templates, regarded by the regulators as a significant step towards enhancing the consistency and comparability of banks' regulatory disclosures.

The BCBS released 'Basel III: Finalising post-crisis reforms to the Basel III framework' in December 2017, with these revised standards taking effect from January 2023 (it has been postponed a year due to the COVID situation) and phased in over five years. The changes include the following elements: revisions to the Standardised and Internal Ratings Based approach for credit risk revisions to the Standardised and Internal Ratings Based approach for credit risk revisions to the leverage ratio and leverage buffer and an aggregate output flow to ensure banks' Risk Weighted Assets (RWAs) calculated by internal models are not lower than 72 52 of RWAs calculated on the Standardised Approach by 2027. The group will take into account its requirements in its future plans.

vorn Trans

The Group is fully compliant with CRR Part Eight and continues to consider the EBA guidelines when preparing Pillar III disclosures to increase transparency and ensure that it follows best practice. In this regard, Appendix 7 shows the mapping of the disclosure requirements of CRR Part Eight to the relevant pages and tables within this Pillar III document.

During 2018 the Group adopted IFRS 9 as issued by the IASB in July 2014, consequently endorsed by the European Union, with a transition date of 1 January 2018. This resulted in changes to accounting policies and adjustments to the amounts previously recognised in financial statements that were explained in detail in 2018 Consolidated Annual Accounts.

As permitted by the transitional provisions of IFRS 9, the Group elected not to restate comparative figures. Any adjustments to the carrying amounts of financial assets and liabilities at the date of transition were recognised in the opening retained earnings of the current period.

Since December 2019 CET1 phase-in is considered as it includes the transitional arrangements due to IFRS9 capital impacts according to article 473 bis CRR following the recommendation of ECB and BoS due to the current uncertainty on the macroeconomic scenario. The calendar has been updated in June 2020 by the legislator to be adapted to the current COVID situation.

# 3. Scope of consolidation

# 3.1 Regulatory consolidation

The Group structure, including the composition of the regulatory group, at 31 December 2019 is set out below.

Chart 1: Regulatory Group structure

At this time Aneto S.a.r.I has only one investment which is WiZink. Therefore, the document is focused in WiZink Bank and its subsidiaries.

There are no legal or regulatory impediments to the capability for the prompt transfer of surplus capital resources over and above regulatory requirements (including individual capital guidance provided by Bank of Spain) or repayment of liabilities when due throughout the Group. There are no current or foreseen material practical impediments to the prompt transfer of own funds or repayment of liabilities among the Group companies.

The Group is not considered an institution of Globally Systemic Importance within the meaning of Article 131 of CRD IV.

#### 3.2 Subsidiary disclosures

The following table describes the main activities of the subsidiaries:

Table 2: WiZink subsidiaries

Subsidiary	Main Activity
Iberalbión, A.I.E.	Marketing of its shareholders' products and activities by telephone, electronic telematics and by any other means of communication that does not require physical presence. Carrying out any
	operational support activities for the shareholders. Auxiliary economic activities of those that its shareholders develop.
WiZink Gestión, A.I.E.	Provide its shareholders with auxiliary services in relation to recoveries and recoveries of assets.  Concierge services of shareholders' premises. Support activities in the marketing of shareholders' credit cards through any channel of distribution, including, but not limited to, the telephone, the sale through mobile points of sale, internet or mailing. Advertising campaigns and other force and promotion of shareholders' credit sales. Generally, operational support and auxiliary tasks on the ingles.
Aplázame, S.L.U.	(i) Granting of non-mortgage loans or credits to consumers under the formula of deferred painting opening of credit or any other equivalent means of financing.

	performance of preparatory work for the execution of the aforementioned contracts, including the provision of such contracts to consumers for their underwriting.
	Programming and development of a platform to postpone payment in purchases of goods or services to individuals by on-line stores, as well as the development of software that allows the creation of these, for later exploitation and sale.
Master Trust Securitisation	Although this is not legally a subsidiary, the Trust is consolidated by WiZink Bank for prudential purposes.

The Group has established a Master Trust securitization structure to provide recurrent capabilities to generate marketable securities for the bank backed by its credit card portfolio.

WiZink retains substantial risk position in the Master Trust as only partial sale of the most senior tranches is made. The Master Trust is mainly used to generate collateral and partially to obtain funding from final investors.

This in substance means the Group is exposed to rights of variable returns from its involvement in the SPVs and has the ability to affect those returns through its power over the entities.

There is no risk transfer associated with the securitisations and therefore for the purposes of regulatory capital and Pillar III disclosures, the SPVs are consolidated within the bank disclosures

## 3.3 Group balance sheet under regulatory consolidation

The table below provides a reconciliation of the Group's balance sheet on an accounting consolidation basis (which includes all Group companies) to the Group's balance sheet under the regulatory consolidation basis as at 31 December 2019.

Due to the group structure there is no difference on the consolidated perimeter for accounting and prudential purposes and therefore the differences are only due to regulatory definitions on capital instruments.

Table 3: Capital reconciliation

ELIGIBLE ELEMENTS (thousand €)	
Capital	147.862
Share premium	685.022
Reserves	165.422
Profit for the year	(287.755
Other accumulated grand total	589
(-)Dividends and remunerations (*)	(18 500
Total Equity to Public Balance	692.640
(-) Adjustments to CET1 due to prudential filters	(19
(-)Goodwill	(11.389
(-)Other intangible assets	(124.408
(-) Defined-benefit pension fund assets	(332
(-) Additional Tier 1 deductions surplus regarding to the additional Tier 1	
(-) Deductible deferred tax assets that rely on future profitability and arise from temporary differences	(90.067
Other temporary adjustments of common Equity Tier 1 (**)	59.134
TIER 1	525,559
Generic funds and overprovisions	
TOTAL REGULATORY CAPITAL	525,55

(\*) On 31 March 2020, the Group's Sole Shareholder, Aneto, agreed to voluntarily increase the Bank's reserves, within the next two months, in an amount equivalent to the interim dividend distributed by the Bank on August 1, 2019 which are surred to €18,500 thousand. The contribution was completed in May 2020.

(\*\*) Since December 2019 CET1 phase-in is considered as it includes the transitional arrangements impacts

fovorn's

# 4. Risk management

This section summarises the overall risk management policy of the Group. More detailed analyses of individual risks (credit risk, market risk, operational risk and funding and liquidity risk) are set out in later sections. Further detail including a statement on the Group's overall risk exposure and management can be found in the consolidated Annual Accounts.

## 4.1 The Group's approach to risk management

Risk management is at the heart of the Group's strategy to enable profitable, long-term growth. This is achieved through a clearly defined risk appetite and informed risk decision-making, supported by a consistent risk-focused culture across the Group.

The mission of WiZink is to be the most flexible, suitable and simple payment and lending solutions in the market. To achieve this, the Bank assumes a certain level of risk as an inherent part of its business model and operations, and in serving its chosen sectors, primarily the credit cards and savings markets. The bank aims to effectively manage and control these risks and recognizes that excessive risk taking, and poorly managed risks can lead to losses and reputational damage increasing the risk to the bank's customers and shareholders.

Risk, in this context, means the possibility of an outcome or event which may have an adverse impact on the bank's customers, capital, liquidity, profitability, reputation and ultimately its viability. The bank is subject to a range of legal and regulatory requirements with which it aims to remain compliant at all times in pursuit of its business strategy and when undertaking day-to-day business operations.

The various risks inherent to WiZink's banking activity are handled further to principles of absolute caution, permanently upholding its basic objectives of solvency, return, efficiency and adequate liquidity.

The risk policy outlines strictly professional criteria followed by the bank to assess, evaluate, undertake and supervise risks, with the view of enhancing the risk/return relationship in relation to credit risk. At the same time, it aims to minimise all other risks (operational, liquidity, interest, market, business, conduct and reputational risks, amongst other).

#### 4.2 Risk culture and values

Risk and compliance culture are established and maintained through a set of common values, principles and behaviours that are adopted and embraced by all of the bank's employees. The Board and the Senior Management of the bank actively set, and promote, the risk and compliance culture and values which are be cascaded throughout the bank.

#### 4.3 Risk appetite

The Group has defined a Risk Appetite Framework (RAF) which reflects the appetite levels, risk tolerance and capacity which the bank is prepared to accept.

The process of managing risk appetite is an integral part of the Group's annual management and control cycle. It is a powerful strategic tool for achieving the ultimate goal of creating long-term and sustainable value. A Risk Appetite Statement (RAS) is approved by the Board with each strategic planning cycle.

Risk management and compliance is applied at the board level when determing the overall business strategy and objectives, and at the operational level in the execution of day to-day business activities.

The Board of Directors approves an annual RAF, which is the set of principles that of our risk appetite levels, risk tolerance and capacity and compares these with RAF comprises the general approach -including policies, processes, water sand which risk appetite is identified, measured, communicated, monitored and control

outrolled by steine through

SWOLL !

internal communication model of risk appetite, risk limits, and a summary of the roles and responsibilities of those that supervise the implementation and monitoring of the framework. The RAF contemplates the most significant risks to which the Group is exposed, particularly the risks identified as material by the Company's material risk identification process.

In addition to the RAF, the Board also approves an annual RAS. The RAS describes the level of risk the group is willing to accept in order to achieve its business objectives. The RAS is the link between the overall business strategy and the risk management framework. The RAS also includes the primary and complementary metrics used to monitor adherence to risk appetite as well as the associated quantitative metric levels for each metric.

In addition, the Board has instituted corporate risk policies that describe the minimum activities, controls and tools that must be in place within all Group companies. It is management's responsibility to ensure that personnel are informed of the strategies and policies relevant to them and that they are compliant with them.

Risk management responsibilities are managed by the Board, the Board Risk Committee, the Board Audit Committee, the Executive Committee, the Assets and Liabilities Committee, the Enterprise Risk Management Committee, the Credit Risk Committee and the Internal Control Body.

#### 4.4 Governance and control

Delegation of authority from the Board to Executive Committees and Senior Management establishes governance and control. Issues are escalated promptly, and remediation plans are initiated where required.

## 4.5 Accountability

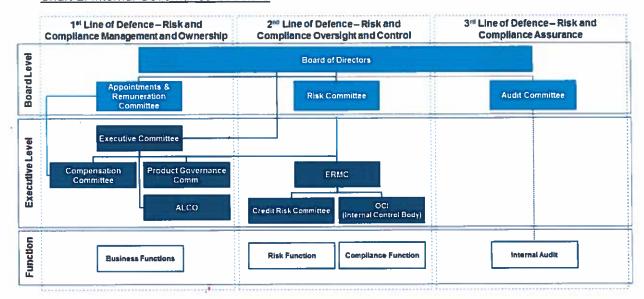

The Group follows a risk management and control model based on three lines of defence that interact with the overall corporate governance structure to define risk and compliance management. The "three lines of defence" model ensures a clear delineation of responsibilities between ownership and management, oversight and control, and independent assurance. The model provides clarity on the key risk and compliance roles, responsibilities and accountabilities and is a core component of the risk management policy. The model follows the guidelines published by the Basel Committee on Banking Supervision in July 2015 titled "Corporate governance principles for banks". The Group also follows and is compliant with the EBA guidelines on internal governance (EBA/GL/2017/11).

- . The First Line of Defence consists of the business units and support areas that, as part of its activity, cause the group's risk exposure. These units, as owners of their risks, are responsible for managing, monitoring and properly reporting the generated risk, which must be adjusted to the risk appetite and the approved risk limits.
- The Second Line of Defence consists of the Risk Control and Compliance areas which are responsible for the development of the Risk Management Framework and Risk Policies, ensuring its effective implementation across the organization risk in accordance with the defined risk
- Internal audit, as the Third Line of Defence and as the last level of control, periodically assesses the policies, methods and procedures' adequacy and checks their effective implementation.

The three lines of defence have a sufficient level of separation and independence. At the same time the structure does not significantly reduce the effectiveness of the general model and act competted

In addition to the three lines of defence, the Board of Directors, the Audit Board Committee are responsible for the proper management and control of reliable level of the organization.

Chart 2: Internal Governance Structure

Risk management is central to the business, consistent with a commitment to protecting our customers and our reputation, ensuring sufficient liquidity and complying with applicable regulations.

The Group has established an enterprise-wide risk management framework that is underpinned by a comprehensive set of policies, operational procedures and governance structures and is supported by systems that enable business to be conducted in accordance with applicable regulations.

This risk management strategy is to ensure that all relevant risks are appropriately identified, measured, monitored and controlled. The Group aims to have adequate human resources, information systems and tools that ensure the maintenance of a prudent risk profile consistent with the appetite established and strong controls over risks.

In addition to all the previous, the external auditors review the financial statements and the internal controls ensuring the company's accounts give a true and fair view of the financial situation of the Group

# 4.6 Risk decision-making and reporting

The CRO provides an overall assessment per risk type to the Board Risk Committee and Board. The CRO is specifically responsible for controlling financial risks (liquidity, solvency, credit, model and operational among others) and the CCLO is responsible for controlling non-financial risks (legal & regulatory, compliance, conduct and reputational among others). This assessment takes into account not only the quantitative results on the metrics but also latest trends and outlook to provide a qualitative view of the risk profile against the Risk Appetite.

#### 4.7 Flow of risk information to the management body

The flow of risk information follows the internal governance structure and three lines of defence model described above with:

The First Line of Defence is responsible for day-to-day risk and compliance management and
ensuring it is integrated into business management and processes. It monitors and properly reports
the generated risk and preparing risk data and reports for communication through the second line
and the committee structure illustrated above.

The 2nd line of defence adopts a risk-based and proportionate approach to the assessment and management of the Bank's risk exposures and compliance matters. Risk and compliance provide independent oversight, monitoring and challenge to the 1st line of defence.

The Internal Audit function as Third Line of Defence performs an independent and voice of advisory and assurance function designed to add value and improve the operations of voice of the control of the c

Swan Transla

its subsidiaries and branches. It helps them to meet their objectives by bringing a systematic and disciplined approach to evaluate and improve the effectiveness of risk management, control and governance processes.

# 4.8 Stress testing

Stress testing is an essential tool to identify, measure and manage risks that examines the sensitivities of the strategic plan and business model. Under a defined Internal Assessment of Capital and Liquidity (IACL), the Group periodically performs extensive stress testing to calibrate the assessment of capital and liquidity adequacy, and to inform the risk appetite of the bank.

#### 4.9 Risk disclosure statement

The Board is responsible for reviewing the effectiveness of the Group's risk management and systems of financial and internal controls.

The Board ensures the alignment of business development and planning with risk appetite. A well-defined risk appetite assists the Group in maintaining a high-quality capital base, in excess of regulatory minimum and which provides for continued investment in the business.

Capital is actively managed within regulatory ratios, with capital targets established in reference to extensive stress testing and annual capital adequacy assessment.

The CET1 ratio phase-in for the Group was 14.32% as at 31 December 2019, above regulatory minimum requirements. Considering the voluntary increase of the Bank's reserves agreed by the Group's Sole Shareholder Aneto of €18,5000 thousand already explained; the CET1 Ratio would be 14.86% (Phase-In) and 12.69% (Fully-loaded).

Similarly, ratios used to monitor liquidity status are also above requirements (Group LCR at 31.12.2019 was 2288%).

# 5. Regulatory capital framework

This section contains an outline of the capital regulations which define a framework of regulatory capital resources and requirements applicable to the Group. CRD IV came into force in the European Union on 1 January 2014. In June 2019 it was published an update of the legislation (CRD V) which should be transposed by the State Members before the end of 2020

## 5.1 Regulatory capital

The capital resources of the Group are detailed in Appendix 1. Total capital resources are entirely in the form of CET1 instruments. This represents the strongest form of capital consisting of ordinary share capital, share premium and allowable reserves.

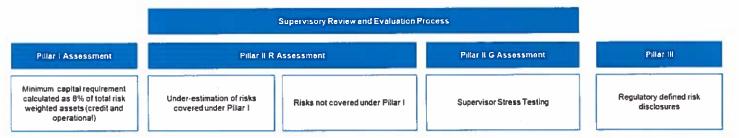

CET1 capital is stated after deducting regulatory adjustments such as intangible assets, and foreseeable distributions of current profits not accrued in the balance sheet, where applicable.

Since December 2019 CET1 phase-in is considered as it includes the transitional arrangements due to IFRS9 capital impacts

#### 5.2 Capital requirements

The capital and prudential requirements included within the capital regulations are categorised under three pillars as illustrated below. Each element is described in further detail in this section.

Chart 3: Summary of CRR requirements

## 5.3 Pillar I capital requirements

Pillar I of the regulatory framework focuses on the determination of risk-weighted assets in respect of the firm's exposure to credit, counterparty credit, operational and market risks.

The regulatory minimum amount of total capital is determined as 8% of the aggregate risk-weighted assets and the Pillar I capital requirements referenced in this document are calculated using this regulatory minimum value.

The bank has adopted the Standardised Approach, as detailed in CRDIV, to the quantification of Credit Risk and Operational Risk. As of 31.12.2019 the Group has no exposure to Market Risk.

#### 5.3.1 Credit risk

The Group is exposed to credit risk primarily through its customer lending and treasury assets held in the Liquid Asset Buffer and for operational purposes.

The Group has adopted the Standardised Approach for all credit risk exposures. The Standardised Approach applies a specified set of risk weights to exposures. Under this applies to determine risk weights for rated counterparties.

Further qualitative and quantitative disclosures on credit risk are provide

# 5.3.2 Operational risk

The Standardised Approach measures the capital requirement as a percentage of the Total Net Revenues. This requires a firm's activities to be split into a number of defined business lines with a specific percentage applied to the income of each business line. The Group adopts this approach, deriving the requirement from the three-year average of the aggregate income of the business.

Further qualitative and quantitative disclosures on operational risk are provided in section 9.

#### 5.3.3 Market risk

The Standardised Approach for market risk applies mainly to trading book positions of institutions. As the Group has no trading activities these are not applicable; therefore, there are no requirements in this regard.

#### 5.4 Pillar II capital requirements

Pillar II is intended to ensure not only that banks have adequate capital to support all the risks in their business, but also to encourage banks to develop and use better risk management techniques in monitoring and managing these risks.

Banks should have a process for assessing their overall capital adequacy in relation to their risk profile and a strategy for maintaining their capital levels and supervisors should review and evaluate banks' internal capital adequacy assessments and strategies, as well as their ability to monitor and ensure their compliance with regulatory capital ratios.

The supervisory review process, together with Pillar III (market discipline), complements Pillar I (minimum capital requirements) in achieving a level of capital commensurate with a bank's overall risk profile.

The Group, following the conditions required in the CRD and in the local guidelines from Bank of Spain elaborates annually the Internal Assessment of Capital and Liquidity (IACL). The main content of the report are the following sections:

- <u>Business Model</u>. Brief description of the core business lines, geographies and main products. It also outlines the strategic plan of the group
- <u>Governance structure and risk control and management.</u> Qualitative assessment of the internal governance reviewing policies, tools and controls used for risk management. It also analyses the Internal Audit and Compliance function
- <u>Risk Appetite Framework</u>. Description of the document; the risks identified, and the metrics monitored.
- Risk profile of the group. It identifies the material risks the group faces on its business and how they are controlled defining the residual risk based on the inherent risk and the risk control for each of them
- <u>Stress Test</u>. The aim is to determine the possible capital needs the group may need under stressed situations.
- Risk Data aggregation. It reflects the data structure of the group
- <u>Capital Self-Assessment</u>. Once the material risks are identified it is needed an exercise to assess how much internal capital is needed to cover the residual risk during a specific timeframe
- <u>Liquidity Self</u>-Assessment. It includes the description of the liquidity policy, metrics and a contingency liquidity plan

• <u>Future Action Program</u>. As a result of all the previous analysis all the areas identify the weak points and plan remediation actions.

## 5.5 Regulatory capital buffers

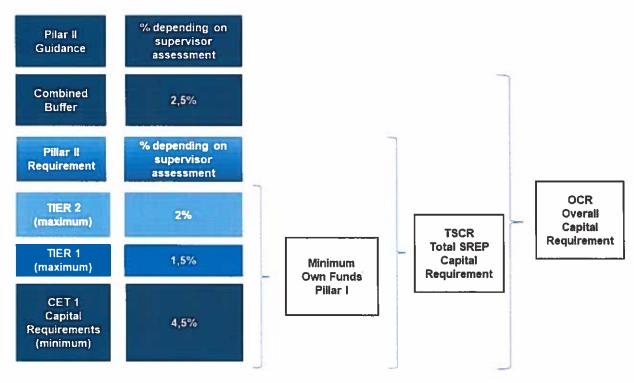

The requirement to maintain a capital conservation buffer (CCB) of up to January 2016.

This buffer needs to be met with an additional amount of Common Equity Tier 1 capital. The buffer sits on top of the 4.5% minimum requirement for Common Equity Tier 1 capital. Its objective is to conserve a bank's capital. When a bank breaches the buffer, automatic safeguards apply to limit the amount of dividend and bonus payments it can make.

Besides this buffer, the CRD IV allows National Competent Authorities to define the Countercyclical buffer, designed to help counter pro-cyclicality in the financial system. Currently the requirement applicable to the Group is 0%. See more details in Appendix 2.

The following table summarises all regulatory capital requirements for the Group:

Chart 4: Summary of minimum regulatory capital requirements

#### 5.6 Pillar III

Pillar III aims to encourage market discipline by developing a set of disclosure requirements which allow market participants to assess key pieces of information on a firm's capital, risk exposures and risk assessment processes. CRD IV sets out the minimum disclosures required under Pillar III (See Annex 7 containing the requirements mapping).

#### 5.7 Leverage framework

Under the EBA leverage requirements, the leverage ratio is calculated by dividing Tier 1 capital resources by a defined measure of on balance sheet assets and off-balance sheet items. The regulatory requirement is a 3% minimum leverage ratio from 1 January 2018. The Group leverage ratio phase-in of 10.53% as at 31 December 2019 (fully loaded: 8,87%) exceeds significantly the minimum amount.

Translato

# 6. Capital management

#### 6.1 Risk appetite

Capital Adequacy of the group is assessed under the IACL. Under this framework WiZink stress tests the impact on the balance sheet and profit / loss generation over the forecast period based on macroeconomic and idiosyncratic stress factors to model the adherence, or otherwise, to both regulatory and internal capital targets. This assessment covers all material risks to which the bank is exposed.

Included in this assessment is the ability to meet the required capital levels and the potential for dividend payments during periods of stress. In formulating this assessment, WiZink also compiles a Capital Contingency Plan that details potential actions the bank would take to maintain, or restore, capital at / to required levels should a stress period evolve and deviate from the base case forecast trajectory.

#### WiZink aims;

- to maintain CET1 above the regulatory minimums required at all times (Pillar I and Pillar II) and to be aligned with both market requirements and common best practices ensuring the financial flexibility to continue developing its activities.
- Maintain a level considered sufficient to withstand a range of severe, but plausible, stress conditions,
- to ensure there is a defined Capital Contingency Plan to protect and restore capital to this level in the unforeseeable event that CET1 has, or has potential to, drop below this ratio,
- to ensure all material (and non-material) risks are identified, measured, monitored and managed appropriately to mitigate the risk of capital depletion below the targeted level.

#### 6.2 Mitigation

The Group has capital management procedures that are designed to ensure compliance with risk appetite and regulatory requirements and are positioned to meet anticipated future changes to capital requirements.

The Group is able to accumulate additional capital through profit retention, by raising equity, and by raising Additional Tier 1 and Tier 2 capital. The cost and availability of additional capital would be dependent on market conditions. As of 31 December 2019, the Bank has no other form of capital except CET1 which is primarily composed of retained profits ordinary share capital and share premium.

The Group is also able to manage the demand for capital through management actions including adjusting lending strategy, including limiting business growth and through business and asset disposals.

## 6.3 Monitoring

Capital is actively managed with regulatory ratios being a key factor in the Group's planning processes and stress analysis.

Each year the Group produces a strategic plan upon which a forecast of capital and capital requirements is made to inform the capital strategy. Shorter term forecasts and assessment of compliance with internally set risk appetite metrics are more frequently undertaken to understand and respond to variations in the Group's actual performance against the plan The Group's an Internal Capital and Liquidity Adequacy Assessment (IACL) on an annual page, incorporating restarial risk identification, measurement and extensive stress testing to assess capital adequacyolevels and establish the capital risk appetite.

Regular reporting of actual and projected ratios is undertaken, including submit Liability Committee, the Board Audit and Risk Committee and the Board

subnations in the set and set

profitability and arise from temporary differences	(90.067)
Other temporary adjustments of common Equity Tier 1 (**)	59.134
TIER 1	525.559
Generic funds and overprovisions	-
TOTAL REGULATORY CAPITAL	525.559

<sup>(\*)</sup> On 31 March 2020, the Group's Sole Shareholder, Aneto, agreed to voluntarily increase the Bank's reserves, within the next two months, in an amount equivalent to the interim dividend distributed by the Bank on August 1, 2019 which amounted to €18,500 thousand. The contribution was completed in May 2020.

(\*\*) Since December 2019 is considered the CET1 phase-in as it includes the transitional arrangements due to IFRS9 capital impacts. The add-on is generated as a result of the first impact of IFRS9 in capital and the variation of stage 1 & 2 provisions considering the calendarized factor.

In 2019 the Group incurred losses amounting 287M€ due to two one-offs; (i) extraordinary provisions due to litigation risks for an amount of 210M€ and (ii) the write-off of goodwill and other intangibles with an impact of 324M€ (with a neutral impact from a solvency perspective). Those adjustments also generated the recognition of 96M€ in DTAs. Without these two impacts the Group would have recorded a profit before tax of 145M€.

# 6.5 Description of main features, terms and conditions of capital instruments

CET1 includes all Common Equity Tier 1 capital items, after applying prudential filters, making the CET1 deductions and applying exemptions subject to the limits set out in the CRR.

Below there is a description of the group's CET1 components

• Capital: includes the full amount of capital fully subscribed and paid up. At 31 December 2919, share capital consisted of 147,862 thousand shares, each with a par value of the Group's shares are not publicly traded.

Share Premium: the share issue premium arises in capital increases and product of the number of shares issued in the increase by the difference between and the par value of each share. This issue premium may be used, as provided by

increase capital and is subject to no restrictions on its distribution. At 31 December 2019, the overall share premium amounted to €685,022 thousand.

- Reserves: this includes the net amount of cumulative earnings from previous years that, in the distribution of profits, are allocated to strengthening the balance sheet, along with permanent adjustments and issue expenses of capital instruments. The laws applicable to Spanish public limited companies (sociedades anónimas) provide that companies make profit must set aside 10% of that profit to the "legal" reserve, until it reaches 20% of capital. The legal reserve may be used to increase capital provided that the remaining reserve balance does not fall below 10% of the increased share capital amount. Otherwise, until the legal reserve exceeds 20% of share capital, it may be used only to offset losses, provided sufficient other reserves are not available for that purpose. Spanish company law also requires entities to set aside restricted reserves for transactions involving treasury shares or the shares of their parent company, in amounts equal to the respective carrying amounts of treasury shares or assets (loans for the acquisition of, or secured by, the shares). These reserves are restricted until the circumstances giving rise to their recognition cease to exist. As at 31 December, the figure for reserves and other reserves amounted to €165.422 thousand before considering the year's results.
- Deductions: are composed of the part that corresponds to goodwill and other intangible assets recognized on the balance sheet. Intangible assets held by the Group comprise those developed by the Group, such as computer software, as well as those identified in business combinations, such as contractual rights arising from relationships with customers derived from acquired businesses and goodwill.

The goodwill is mainly result of the business combinations acquired during the last years. It is comprised by the result of the acquisition of Citibank Spain's business in 2014 and the purchase of the credit card businesses in Spain and Portugal of Barclays Bank plc

In 2018 there were intangible assets acquired in business combinations due to the Aplázame S.L. acquisition.

In December 2019 there was a write-off on the Goodwill and Other intangible assets of the Group that explains the decrease in these deductions from 501M€ in December 2018 to 136M€ in December 2019

Since June 2019 there are also deductions due to the DTAs which were noticeably increased as a result of a change in the prudential law (UE 2019/876 – CRR II).

 Temporary adjustments of common Equity Tier 1: Since December 2019 is considered the CET1 phase-in as it includes the transitional arrangements due to IFRS9 capital impacts following the recommendation of ECB and BoS due to the current uncertainty on the macroeconomic scenario.

Further detail can be found in the Risk Exposure and Management section from the consolidated Annual Accounts.

Tier 1 Capital includes CET1 Capital plus Additional Tier 1 Capital (AT1). AT1 is composed of issues of qualifying hybrid instruments net of the AT1 deductions. At 31 December 2019, the group had no AT1, as it issues no such instruments. As a result, the CET1 and Tier 1 Capital figures are the same.

Tier 2 Capital is characterized by a lower degree of permanence and stability than Tier 1 capital. As at 31 December 2019, the Group had issued no Tier 2 equity instruments and has no other capital qualifying as Tier 2.

# 7. Pillar I capital requirements overview

# 7.1 Group risk-weighted assets and Pillar I capital requirements

The Pillar I capital requirements of the Group are composed of credit risk and operational risk.

The following table sets out the risk-weighted assets and Pillar I capital requirements of the Group.

Table 5: Risk-weighted assets and capital requirements

	Risk Weigh	ted Assets	Pillar 1 Capital Requirements		
TYPE OF RISK	2019 thousand €	2018 thousand €	2019 thousand €	2018 thousand €

# 7.3 Minimum own funds requirements for market risk

The Group does not have a trading book and is therefore not subject to capital requirements for this risk.

## 7.4 Minimum own funds requirements for operational risk

WiZink Group applies the standardized approach to calculate its minimum own funds requirements for operational risk, having complied with the requisite formalities to request use of that approach. That approach involves determining capital requirements based on average relevant revenues for the last three financial (3) years (in this case, 2017, 2018 and 2019).

Relevant revenues are allocated to the business lines stipulated by the standards, and the relevant weighting factors are then applied, to determine the own fund requirements for this risk.

At 31 December 2019, the calculation described above yields operational risk own funds minimum requirements of €74.502 thousand.

Table 7: Capital Requirements for operational risk. Standardized approach

	Rele	Relevant Revenues		Pillar 1 Capital Requirements	
TYPE OF RISK	Year -1 thousand €		Year -3 thousand €	2019 thousand €	
Retail banking - 12%	643.355	638.683	580.507	74.502	
Total	643.355	638.683	580.507	74.502	

# 8. Pillar I capital requirements - credit risk

#### 8.1 Definition

Credit risk is defined as the risk that a borrower or counterparty fails to pay the interest or the capital due on a loan or other financial instrument (both on and off-balance sheet).

#### 8.2 Risk appetite

The Group targets a strong risk culture, supported by policies, procedures and controls to mitigate credit risk. WiZink credit risk exposure is focussed on credit cards for individuals and has no appetite for lending to SMEs or corporate entities. Balance sheet growth is primarily driven by new-to-bank customers with conservative initial credit lines and controlled exposure during their life cycle. The Group targets non-sub-prime borrowers based on credit score, external data sources and responsible lending criteria.

Risk Appetite is established by reviewing credit risk drivers, establishing metrics and controls to prevent and detect deviations that could lead to higher credit losses than expected as the group assumes a certain level of credit risk as an inherent part of its business model and actively ensures that the balance between the level of risk and the reward are consistent with its aim of establishing safe and sustainable returns.

In doing so, the group recognises that credit risk may increase above the expected level and establishes a risk appetite for an acceptable level of credit losses and related drivers and delinquency metrics. These are articulated as risk appetite metrics.

#### 8.3 Exposures

The principal sources of credit risk arise from loans and advances to customers and loans and advances to banks and government bonds held in the Liquid Asset Buffer. The credit risk exposures of the Group are set out on section 8.7.

Credit risk in the wholesale portfolio arises from loans and advances to banks and investments in government bonds.

#### 8.4 Measurement

The Group has adopted the Standardized Approach to the quantification of capital requirements across all portfolios in the bank, using external ratings for wholesale counterparties to determine the risk weightings, where applicable.

#### 8.5 Mitigation

Credit risk is managed in the following ways:

## 8.5.1 Credit policy

The credit policies applied in WiZink cover the full product lifecycle (acquisitions, existing customers and collections) and are defined in the Credit Policy Manual separately for Spain and Portugal. Both documents are approved by the Board of Directors on an annual basis.

The policy defines the credit authority, underwriting strategy and process, portfolio maintenance policy, exposure programs criteria and collections strategy. In general, the majority of the credit strategies are performed automatically, based on system decision engines, except the collections strategy which depends on the collections agent assessment and particular underwriting credit decisions that are automatic referred by the system.

#### 8.5.2 Credit underwriting

The process of Credit Risk identification, assessment and mitigation complies with Wizink's risk management and control frameworks at the organization level.

WiZink has developed a strong underwriting and risk management expertise, resulting in well-balanced cost of credit, which is grounded on conservative policies and extensive use of scoring models to predict risk behaviours. This expertise supports the identification and mitigation of emerging credit risks, which is complemented by a collections strategy and operational model, robust collections system with a wide range of functionalities to ensure a deep level of data analysis. This assists in managing the level of customer delinquency and to restore performing status or minimise credit losses where the customer is identified to be in financial distress.

Consequently, the group is able to drive credit portfolio programs and policies based on behavioural scores and segmentations avoiding concentration; applying continuous champion/challenger testing to find optimal risk reward trade-offs, limited by the total portfolio losses and doubtful balances defined in the credit risk appetite.

#### 8.6 Monitoring

The Group produces regular monitoring reports for review by Senior Management and the Board of Directors as well as the Board Risk Committee. A robust review discipline has been established to track the delinquency metrics, in both coincident and lagged view, characteristic analysis, portfolio distribution by customer profile, score distribution, demographics, etc. allowing the bank to identify and anticipate problematic situations in the credit portfolio behaviour to enable an agile response related to credit policies changes and/or collections efforts.

## 8.7 Credit risk exposure by industry or counterparty type

The following table shows, broken down by exposure categories for the standardized approach, the amount of exposure to credit risk after applying valuation adjustments and impairment write downs. In each case, the exposure to SMEs is specified.

Table 8: Credit risk exposures by industry or counterparty type:

EXPOSURE CATEGORY	Original exposure (thousand €)	Of which SME	Value adjustments and provisions	Exposure net of value adjustments and provisions (thousand €)
Central administration or central banks	631.835		-	631.835
Regional administrations or local authorities	-		-

Participations or shares in collective investment	-		-	
Equity exposures	4.757		-	4.757
Other	42.154		-	42.154
TOTAL EXPOSURE	4.700.112		- (318.209)	4.381.903

Exposure to central government and banks represent high quality liquid assets (HQLA) held within the Liquid Asset Buffer for liquidity management purposes. Spanish Government Bonds are held within the LAB and are also used, in part, to collateralize borrowing under the Targeted Long-Term Repo Operations (TROs) or other Central Bank Refinancing Operations. Further detail on asset enabling france is given in Appendix 4

## 8.8 Credit risk exposure by risk weight

The tables below give details of the Credit risk exposure by risk weight.

For exposures to institutions, the Group uses credit ratings provided by the recognized credit rating agency Fitch.

Table 9: Credit risk exposures by risk weight

# 8.12 Equity exposures not recorded in the trading book

Since the application of IFRS9 the denomination of the classification of the equity has changed:

The table below shows the assets advances classified as not held for trading and mandatorily at fair value through profit or loss.

Table 13: Exposures not held for trading at mandatorily at fair value through profit or loss.

	Thousands of Euros		
	31/12/2019	31/12/2018	
Equity instruments		-	
Debt securities <sup>(*)</sup> Loans and advances	318	318	
	318	318	

Equity positions are strategic investments in a small portfolio of non-trading equity securities in clearing houses classified at fair value through other comprehensive income under irrevocable decision as permitted under IFRS 9. As such, changes in the fair value of these strategic investments are recognised in other comprehensive income. The changes in fair value of these securities will no longer be reclassified to profit or loss when they are disposed.

#### 8.13 Credit risk impairments

During 2018, exercise IFRS9 is introduced, modifying the methodology to recognize the impairment on the financial assets. IFRS 9 introduces an expected credit loss impairment model which is significantly different from the IAS 39 incurred loss model.

IFRS 9 impairment requirements are not triggered when a credit event has already had an impact on the expected future cash flows from a financial instrument but, instead, the expected credit losses are required to be recognised from origination of the financial asset and reassessed for changes at each reporting date to reflect potential changes in credit deterioration since initial recognition.

The impairment model is applied to all financial assets, except for financial assets classified or designated as at FVTPL and equity investments that are irrevocably designated as at FVOCI, which are not subject to an impairment assessment.

The Expected Credit Loss is measured on either a 12-month or a lifetime basis depending on whether a significant increase in credit risk has occurred since initial recognition or whether an asset is considered to be impaired. Expected credit losses will be measured in accordance with a three-stage expected credit loss impairment model:

- <u>-Stage 1</u> Current non-deteriorated book. From initial recognition of a financial asset before the date on which the asset has experienced a significant increase in credit risk relative to its initial recognition, a 12 months expected credit loss allowance is recognised.
- <u>-Stage 2</u> Exposures where significant increase in credit risk has been observed since initial recognition. For these exposures, a lifetime expected credit loss allowance is recognised.
- <u>-Stage 3</u> Credit impaired exposures. When a financial asset is considered to be credit-impaired, a loss allowance equal to full lifetime expected credit losses will be recognised. Interest revenue is calculated based on the net carrying amount of the asset, adjusted for the loss allowance, rather than on its gross carrying amount as for Stage 1 and Stage 2. Purchased or originated credit-impaired financial assets are those financial assets that are credit-impaired on initial recognition. Their expected credit loss is always measured on a lifetime basis.

Changes in the expected credit loss allowance are recognised in profit or loss as exposures move between stages. Because migration between stages follows the general pattern of credit deterioration and the forward economic guidance also drives stage allocation, impairment charges are expected to be pro-cyclical and volatile.

The categorisation of credit risk is detailed in the table below. Note that all credit risk exposures and associated impairments, provisions, past due items and credit adjustments relate to exposures in Spain and Portugal and relate to retail lending exposures. There are no impairments in respect of exposures in any other geography or industry sector.

Table 15: credit risk exposures by impairment level

# 8.14 Impairment provisioning

The Group's impairment provisions are calculated in line with IFRS 9 which provides for expected credit losses based on the credit risk categorisation of the exposure. Full details are provided in the consolidated Annual Accounts. Following the adoption of IFRS 9 all provisions have been classed as specific credit risk adjustments. For more details on IFRS 9 adoption by the group, see the 2019 consolidated Annual Accounts.

# 8.15 Exposure to securitization

This information is required for institutions calculating risk weighted exposure amounts in accordance with part 3, title II, chapter 5, or own funds requirements in accordance with articles 337 or 338. The Group does not have securitization exposures requiring own funds and therefore is exempt of this obligation.

# 9. Pillar I capital requirements - operational risk

# 9.1 Definition

Operational risk is defined as the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events, including legal risk.

The main sources of operational risk may include fraud, the reliability of systems, human error, supplier failures, IT security, business continuity, the management of change, the outsourcing of operations and non-compliance with legal and regulatory requirements.

## 9.2 Risk appetite

The group targets a strong risk culture, supported by policies, procedures and controls to mitigate operational risks. WiZink aims to mitigate operational losses and to achieve an adequate level of recovery in the event they materialize, particularly fraud.

Risk Appetite is established for a detailed review of all potential causes of operational risk events, ensuring there are controls in place to prevent and detect incidents, and an appropriate framework that guarantees there is a consistent and continuous management of operational risk across WiZink. In doing so, the group recognises that operational risk events do occur and establishes a risk appetite for an acceptable level of events and losses. Follow up of this appetite is performed via risk appetite metrics.

## 9.3 Exposures

The following control procedures are executed to identify potential sources of operational risk and to measure and monitor any events which arise:

- Risk and Control Assessment (RCA): It is the primary approach for the identification, assessment and reporting of Operational Risks and other risk related that could adversely impact on the execution of WiZink's Business and Strategy. It is performed annually.
- Manager's Control Assessment (MCA): All Business Units must complete internal control testing
  in line with the testing methodology provided by the Second Line of Defence Operational Risk
  Function to ensure controls are designed and continue to operate effectively.
- Issue and Risk Acceptance Management: provides guidelines on how to identify, evaluate and manage Issues, Action Plans and Risk Acceptance.
- Operational Incidents Management: designed to support the reduction of financial and nonfinancial impacts across the bank due to operational incidents and prevent reoccurrence.
- Quality Review Execution and Management: establishes the guidelines to be followed by the Operational Risk Function for planning and executing the MCA Quality Assurance Reviews.
- Key Risk Indicators (KRIs) Management: describes the role and purpose of risk indicators, the elements of an effective risk indicator framework and some important practical considerations.
- Risk & Control Environment Evaluation: provides the guidelines on how to assess the risk and control environment

The principal operational risks to the Group are:

- IT systems and resilience risk arising from failure to develop, deliver and maintain effective IT solutions;
- information security risk arising from information leakage, loss or theft;
- external fraud arising from an act of deception or omission;
- cyber risk arising from malicious attacks on the Group via technology, networks and systems.
- service disruption;
- failure of a third-party corporate partner or strategic supplier; and
- normal business operational risk including transaction processing, implementation of change.

#### 9.4 Measurement

A variety of measures is used such as scoring of potential risks, considering impact and likelihood, assessing the effectiveness of controls, monitoring of events and losses by size, functional area and internal risk categories. The Group maintains a formal approach to operational risk event escalation.

Material events are identified, captured and escalated. The root causes of events are determined, and action plans put in place to ensure an optimum level of control. This ensures the Group keeps customers and the business safe, reduces costs, and improves efficiency.

## 9.5 Mitigation

The WiZink Operational Risk Management Policy and the ICT Risk Management Policy establish, amongst others, clear and concise principles and requirements, which the business must satisfy in order to capture, collect and to carry out an appropriate analysis on internal incidents.

The Operational Incidents Management procedure presents a consistent approach and sets the minimum standards to comply with the principles and requirements stated in the Operational Risk Management Policy and to fulfil Regulatory requirements for Bank of Spain and Basel II Directive. It contains the requirements to manage Operational Incidents within a common frame so that they can be identified, measured and reported effectively, efficiently and in a consistent way across the entire Organization.

The Group's control environment is regularly reviewed. Reporting on material risks is discussed monthly by Senior Management. Risks are managed through a range of strategies.

The operational risk management strategy is to identify the events that cause operational losses and control those events in order to minimize their possible negative impacts. To that end, improvements in operational processes and reinforcement of operational controls have been implemented. There are two categories of operational losses: (i) losses related to external fraud and (ii) ordinary loses, which are all the other losses the group might experience that are not related to fraud.

The group has developed a specific management tool to handle both operational losses related to fraud and ordinary operational losses. Regarding fraud, the aforementioned management framework includes provisions to reduce, mitigate and recover losses. The aim is to reduce fraud and ordinary operational losses and to achieve an adequate level of recovery.

## 9.6 Monitoring

Monitoring and reporting of operational risk is undertaken at Board and Board delegated committees, Executive Committee and the ERMC. A combination of systems, monthly reports, oversight and challenge from the Risk function, Internal Audit and assurance teams ensures that key risks are regularly presented and considered by Senior Management.

#### 9.7 Operational risk capital requirement

The standardised approach measures the capital requirement as a percentage of the total net revenue. The Group adopts this approach, deriving from the three year average of the aggregate risk-weighted income of the underlying business. This requires a firm's activities to be split into a number of defined business lines with a specific risk weight applied to the income of each business line.

At 31 December 2019, as a result of this approach, the Group Pillar I capital requirement for operational risk was 74,502 thousand € (2018: 70,347 thousand €) represented by risk-weighted assets of 931,272 thousand € (2018: 879,344 thousand €)

# 10. Exposure to Interest Rate Risk in positions not included in the trading book

#### 10.1 Definition

Structural interest rate risk or Interest Rate Risk of the Banking Book (IRRBB) is defined as the Group's exposure to changes in market interest rates as a result of the timing mismatch between maturities and repricing of assets and liabilities on its balance sheet.

## 10.2 Risk Appetite

The risk appetite is based on the sensitivity of Earnings and Market Value to standard rate shocks. The overall strategic objective for WiZink is to ensure the bank manages its interest rate, valuation and risk positions within acceptable tolerance to earnings / value impacts from rate shocks.

WiZink performs the management of the IRRBB supported by a set of limits whose objective is to minimise the impact of adverse interest rate movements on the earnings and on the computable own funds. The main purpose of such management is to optimise the net interest margin and to obtain results that are stable and sustainable over time.

# 10.3 Capital requirement

There is no defined Pillar I calculation in respect to IRRBB therefore there is no regulatory capital requirement. However, the group identifies capital in respect of IRRBB under Pillar II and internally allocates a prudent sum to cover the potential for adverse movements.

The vast majority of the group's assets (including credit cards, cash, intangible assets, goodwill and other assets), and a proportion of liabilities (TLTRO and Equity) do not move in line with market rates.

#### 10.4 Measurement

Measuring, monitoring and managing IRRBB depends on a detailed knowledge, and planning, of:

- The run-off profile of assets and liabilities, especially where there is no contractual maturity,
- the price impact of a change in interest rates where there is no contractual link to market indices.
- · customer behaviours.

The Group quantifies the impact to economic value and earnings arising from a shift to interest rates using stress scenarios. These scenarios examine the interest rate re-pricing gaps, asset and liability interest rate bases and product optionality.

The Group maintains IRRBB management practices in line with applicable regulatory expectations.

Interest rate risk exposure is measured as follows:

- Change in Net interest income to a parallel shift in the rate curve of +200bps over a 12-month period.
- Change in Economic Value of Equity (EVE) to a parallel shift of +200bps over the balance sheet horizon.

## 10.5 Mitigation

IRRBB is governed and operated under a specific standard, the Non-Traded Risk Management Standard. This standard defines the framework for management of Interest Rate Risk in the Banking Book (IRRBB).

Sworn Tra

This standard includes the measurement and management of IRRBB including

- The limit setting process,
- Metric and scenario definition,

- Allowable instruments to be used to hedge IRRBB.
- o FX Risk

IRRBB risk mitigation and current strategy is based on the following key principles:

- Maintaining a mix of retail funding in the region of 75-80% Term Deposits. This provides insulation
  against rate rises but is not as flexible in a rate reduction scenario.
- Ensuring access to longer term fixed and floating rate funding is maintained via the Master Trust securitisation SPV.
- Ensuring that there is a limit on the amount of Term Deposits that re-price over a short (3 month) period to provide insulation against a rapid rise in funding costs.

Currently the bank does not enter into derivative transactions to hedge any assets or liabilities or otherwise take any proprietary or directional positions.

#### 10.6 Monitoring

Interest rate risk is monitored centrally using the measures described above. The Asset and Liability Committee regularly reviews market risk exposure as part of the wider risk management framework. The Asset and Liability Committee reviews and approves strategies to manage IRRBB.

The following table shows the Economic Value of Equity and NII Sensitivity at 31.12.2019

Table 17: Economic Value of Equity and NII sensitivity

	200 b.p rise	200 b.p drop
Change in net interest income to +200 or -200 pb movement / Net interest Estimated	-4,20%	0,10%
Economic Value of Equity (EVE)	-5,70%	-0,75%

# 11. Funding and liquidity Risk

#### 11.1 Definition

Funding risk is defined as the inability to raise and maintain sufficient cost-effective funding in quality and quantity to support the delivery of the business plan.

Liquidity risk is defined as the inability to accommodate liability maturities and withdrawals, fund asset growth and otherwise meet contractual obligations to make payments as they fall due.

## 11.2 Risk appetite

The objective is to maintain a liquidity and funding structure that allows the group to meet the liquidity obligations under both normal and stressed market conditions. The aim is to maintain stable and diversified funding and ensure that the group is able to rebuild liquidity levels quickly under stress scenarios without jeopardizing the business.

#### 11.3 Measurement

The group adopts a range of metrics to measure and monitor both short and long-term liquidity requirements including ratios, cash outflow triggers, wholesale and retail funding maturity profile, early warning indicators and stress test survival periods.

The liquidity risk appetite is articulated as a suite of metrics, quantified daily, which monitor the liquidity and funding position both at a point in time and on a forward-looking basis. Strict criteria and limits are in place to ensure sufficient highly liquid assets, such as cash or marketable securities are available as part of the Liquid Asset Buffer. Investments held within the LAB are also subject to strict criteria.

The measurement framework incorporates:

- Daily quantification of the volume and quality of the group's LAB, defined through a series of stress tests across a range of time horizons and stress conditions. The group ensures a liquidity surplus is held during normal market conditions above liquidity stress outflow requirements. Stress cash outflow assumptions have been established for individual liquidity risk drivers across idiosyncratic and market wide stresses.
- The group maintains a sufficient stock of Contingent Liquidity in the form of cash and retained
  notes issued by the Master Trust securitization structure, which can be readily converted into cash
  through sale, repo, or by pledge to the ECB. The level of contingently liquidity requirement is also
  quantified on a daily basis on a forward-looking basis over both short and longer term survival
  periods.

The group maintains a Liquidity Contingency Plan which is designed to provide an early warning indicator for liquidity concerns and a list of potential actions to address a deterioration in liquidity conditions or actual position. As a result, mitigating actions can be taken to avoid a more serious situation developing.

# 11.4 Monitoring

Liquidity is actively monitored by the group. Reporting is conducted through the Asset and Liability Committee and the Board of Directors. In a stress situation the level of monitoring and reporting is increased commensurate with the nature of the stress event, as detailed in the LCP.

Daily monitoring and control processes are in place to address internal and regulator liquidity requirements. The group monitors a range of market and internal early warning requests of frequent basis for early signs of liquidity risk in the market or specific to the Group. These are a mixture of quantitative and qualitative measures including daily variation of customer balances, oash outflows, changes in primary liquidity portfolio, and changing funding costs.

Table 18: Liquidity and Funding Ratios (as of 31st of Dec 2019)

	Thousand of €

# Appendix 2: Disclosure of information in relation to the compliance of institutions with the requirement for a countercyclical buffer

As part of the banking reforms introduced by Basel III, a countercyclical capital buffer is required to ensure banks take account of the macro-financial environment when assessing adequate capital requirements. The buffer is to help protect banks during periods of excess aggregate credit growth that have often been associated with the build-up of system wide risk. This regime is intended to help reduce the risk that the supply of credit will be constrained during a period of economic downturn which in turn could undermine the performance of the real economy and consequently result in additional credit losses in the banking system.

The Group's operating performance is monitored and assessed based on two geographical segments - Spain and Portugal, which the Group's management considers to be an adequate representation of its activities.

Bank of Spain has decided to maintain at 0% the countercyclical capital buffer (CCB) rate applicable to credit exposures located in Spain in the first quarter of 2019. The analysis of cyclical systemic risk warning indicators does not reveal widespread excessive credit growth in Spain, so this assessment is consistent with maintaining the CCB rate at 0% in the current situation.

Similarly, the Bank of Portugal is responsible for setting and disclosing, on a quarterly basis, the countercyclical buffer rate that applies to all credit institutions and investment firms with credit exposures to the domestic private non-financial sector. It has also decided to apply a 0% buffer.

The table below summarises the group's total exposures based on country of economic operation of the customer. Where applicable, a countercyclical capital buffer rate would be applied to the own funds requirement for the geographic region to capture an additional countercyclical requirement.

<u>Table 20: Geographical distribution of credit exposures relevant for the calculation of the countercyclical buffer – consolidated group</u>

		Thousa	nds of Euros	
ASSETS	Spain	Portugal	Intra-segment Eliminations	Total

## Appendix 3: Analysis of the leverage ratio

Part seven of Regulation 575/2013 lays down the rules for determining the leverage ratio of institutions, which is calculated as the Group's Tier 1 capital divided by the measure of exposure for purposes of that ratio, expressed as a percentage.

**Tier I capital**: the breakdown of the qualifying capital may be consulted in table 1 from the point 5 of this document, which has been calculated according to the CRR criteria.

**Exposure:** as provided in article 429 of the CRR, exposure is measured, in general terms, according to the carrying value, with the following considerations:

Non-derivative exposures on the balance sheet are included net of provisions and of accounting valuation adjustments.

The measure of the bank's total exposure is obtained by adding up the following items based on the regulatory balance sheet:

- 1. Positions on the balance sheet (excluding derivatives and repos, which are considered afterwards): the accounting balance of the assets per the financial statements is included, leaving out the aforesaid items.
- Exposures in derivatives: there is included the exposure referred to the EAD used in measuring capital charges for counterparty risk, which includes both the exposure (net of offsets and guarantees) and the add-one adjustment for potential future risk.
- 3. Securities financial transactions (SFT): there is included the EAD adjusted for the value of the collateral and other haircuts as provided in article 220 of the CRR.
- 4. Off-balance sheet items: these are contingent risks and commitments primarily associated with guarantees and undrawn facilities. A floor of 10% is applied to the conversion factors (CCFs) in line with what is provided in Article 429(10)(a) of the CRR.
- 5. Tier I deductions: all asset amounts that have been deducted when determining Tier1 capital are deducted from the exposure in order to avoid redundant exposures. In this respect, the main deductions are intangible assets, tax loss carryforwards and others defined in article 36 of the CRR.
- 6. Equity investments in bank, financial, insurance and commercial entities not included within the scope of prudential consolidation (if applicable), as provided in article 429.4.

Based on the terms of article 499.3, during the transitional period running from 1 January 2014 to 31 March 2017 the Group will calculate the end-of-quarter leverage ratio and use the Tier 1 capital subject to adjustments for under the transitional provisions of Article 499.1.b) of the CRR.

The following tables show the Group leverage ratio disclosures made in accordance with the Commission Implementing Regulation (EU) 2016/200. Any blank cells in the template have been removed from this disclosure.

Table 21: Calculation of leverage ratio

Leverage Ratio Calculation	Amount (Thousands of euros)	
Tier 1 capital phase-in	525.559	
Total Exposures phase-in	4.988.431	
Leverage Ratio phase-in	10,54%	

Leverage Ratio Calculation	Amount (Thousands of euros)
Tier 1 capital fully loaded	437.155
Total Exposures fully loaded	4.926.076
Leverage Ratio fully loaded	8,87%

The following table shows the total exposures and a reconciliation with the accounting information in the financial statements

Table 22: Leverage ratio exposures:

Leverage ratio exposure (thousand of €)	
On-balance sheet items (excluding derivatives, SFTs, fiduciary assets, but including collateral)	4.461.903
(Asset amounts deducted in determining Tier 1 capital phase-in)	-136.130

### Asset encumbrance - sources of encumbrance

Table 25: Sources of encumbrance

	Matching liabilities, contingent liabilities or securities lent	Assets, collateral received and own debt securities issued other than covered bonds and ABSs encumbered
Carrying amount of selected financial liabilities (thousand of €)	676.013	951.070
of which: deposits	400.800	580.449
of which: debt instruments	275.213	338.575
of which: other sources	0	75.037

The same regulatory consolidation scope is applicable to asset encumbrance and liquidity disclosures. Further detail on the regulatory consolidation scope is given in section 3. Asset values reported in the tables above are based on the median of the end of period values for each of the four quarters in the year. An asset is treated as encumbered if it has been pledged or if it is subject to any form of arrangement to secure, collateralise or credit enhance any transaction from which it cannot be freely withdrawn.

The principal sources of encumbrance for the group include assets pledged as collateral for securitisation and the T-LTRO II. In addition, encumbrance arises from collateral requirements for central bank operations and on cash reserves and securities supporting secured funding structures.

Any excess collateral provided above the minimum collateral required is deemed unencumbered unless it cannot be freely withdrawn. No assets are encumbered through transactions between entities of the Group.

Over-collateralisation plays a key role among the credit enhancement actions.

At 31 December 2019, 454,740 thousand € of assets are encumbered to back the notes external noteholders (350,800 thousand of senior notes + 78,200 thousand € of jurior retained notes a 6% of over-collateralisation). The Group does not have any significant foreign currency exposures.

"Other assets" mainly comprises loans and advances to customers. Certain assets "Other Assets" category, although classed as unencumbered, are deemed no

med not evaluate for

orn translator

encumbrance in the normal course of business due to the nature of these assets. These include tangible assets, intangible assets, deferred tax assets and other non-financial assets.

At 31 December 2019, the Group has retained asset-backed securities with nominal value of €959,200 thousand (€775,000 thousand of which are eligible as collateral at the ECB), and €301,570 thousand have been encumbered in order to access the TLTRO II.

## Appendix 5. Group remuneration disclosures

### **Appointments and Remuneration Committee**

The current remuneration policy aims to align staff efforts with company performance and provides a competitive compensation package to attract employees and keep them committed to the Group, with a strong focus on ethical behaviour and effectiveness.

Transparency and compliance with the law are the principles that informs all terms of that policy.

The Group Appointments and Remuneration Committee at 31 December 2019 was composed of the following members:

- Chair: Mr. Peter Ronald Herbert (Independent Director)
- Members:
  - Ms. Geeta Gopalan (Independent Director)
  - Mr. Krzysztof Drozd (Proprietary Director)
- Secretary: Ms. Blanca Rivilla Calle (Non-Director)

The tasks of this committee are described below.

#### **Appointments**

- Identify and recommend, with a view for approval by the Board of Directors or the General Shareholders' Meeting, candidates to cover vacancies in the Board of Directors.
- · Assess the balance of knowledge, capacity, diversity and experience in the Board of Directors, and prepare a description of the duties and skills needed for a specific appointment, valuing the dedication needed in terms of time to hold the position.
- Evaluate periodically and at least once a year the suitability of the members of the Board of Directors and of the Board of Directors as a whole and report the conclusions to the Board of Directors.
- Evaluate periodically that the composition and operation of the Board prevents that the resolutions taken by the Board of Directors are not dominated by one individual or small group of individuals, so that they harm the interests of the Bank as a whole.
- · Submitting proposals to the Board of Directors for the appointment, re-election, and of members to form part of each of the Board's Committees.
- Reporting proposals for appointments and removal of the Board Secretary and Vice Secretary.
- · Submitting to the Board of Directors reports on selection, appointment, suitability and, if applicable, removal of the Managing Director as well as effective supervision thereof through oversight of the management activity and continued evaluation of such officers.
- Submitting to the Board of Directors reports on the design and supervision of the selection and appointment policy of the other members of the identified staff (members of the executive committee and similar officers, including key positions at the Bank).

 Assess the suitability of key position candidates according to the Procedure suitability of directors and key personnel.

Report the gender diversity policy of the Bank to the Board of Directors. Management the gender diversity policy.
Report the policy to determine the identify staff to the Board for approval.

Annual determination of the positions to be included in the list of Identified Staff.

#### Remuneration

- Prepare the decisions to be adopted by the Board of Directors relating to remuneration, including those that impact the Bank's risk and risk management.
- Report the general remuneration policy of the members of the Board of Directors, as well as the
  individual remuneration and other contractual conditions of the members of the Board of Directors
  who perform executive functions, and, as the case may be, of the Managing Director or similar, and
  ensure these conditions are observed.
- Submitting to the Board of Directors reports on the definition of the basic conditions of senior management contracts, as well as approval of the remuneration, including the annual supervision of the application of the Remuneration Policy for employees who, although not part of senior management, assume risks or are assigned to the Bank's internal control functions (i.e., internal audit, risk management or compliance) or receive remuneration that takes them on the same remuneration bracket as senior managers and risk takers and whose professional activities have a material impact on the Group's risk profile (all of whom comprise, together with senior management and the Bank's Board of Directors, the "Identified Staff", which will be defined at any given time in accordance with applicable regulations).
- Report the general remuneration policy of the Bank, including the remuneration policy of the identified staff, and procedure for the application of the malus and clawback clauses.
- Asses the application of the remuneration policy and practices of the institution, ensuring that they
  are subject to a central and independent internal review at least annually, and monitors the
  elimination of any gaps identified in the central and independent review for compliance.
- Ensure that the variable remuneration policy of the identified staff and the payout process for variable remuneration of certain members of the identified staff is fully compliant at any time.
- Collaborate in the determination of the existence of any set of circumstances that might result in the application the malus and clawback clauses.

## Information on the linkage between remuneration and performance: main features of the remuneration system

As at 31 December 2019, 100% of employees were covered by variable compensation plans that link their remuneration to individual, departmental and corporate goals. The most common formula involves measuring and paying the variable sums at the beginning of the following year. All of the variable remuneration plans link accrual of this compensation to standards of quality and to strict fulfilment of internal rules.

For staff in central services, the variable remuneration consists of an amount based on a budget linked to the bank's earnings and is approved by the Board of Directors. That amount is distributed according to an objective formula that interrelates personal performance at an employee level, fixed remuneration and evaluation of performance by the area manager.

The Board of Directors has decided to increase the maximum ratio between fixed and variable remuneration to 1:2.

Staff with variable pay of more than €50,000 per year defer 50% of the amount over 3 years. Both deferred and cash payments are subject to retention or refund clauses in relation to action the action to action the company.

## Disclosure of criteria for measuring the performance on which entitlement to shares, options or variable remuneration components are based

Group policy on discretionary variable remuneration (annual bonus) is pegged to the group's performance as measured by comparing the business results obtained with the initially budgeted targets, as well as on achievement of the main objectives for business development initiatives and meeting the stipulated customer satisfaction thresholds.

The formula based remuneration policy, in turn, involves incentive plans and is based on achievement of targets for revenue, number of card applications, cost control per account and on quality and control factors.

#### Determination of "identified staff"

"Identified staff" consists of all persons whose work has significant implications for the Group's risk profile, for a period of at least 3 months within the same financial year, in accordance with the provisions of section 89 of the EBA Guide, including the Board of Directors. The Group "Identified staff" consists of the following positions:

- Chief Executive Officer
- Internal Audit Director
- Chief Corporate Development & Innovation Officer
- Chief Customer Management Officer
- · Chief Business Transformation and Optimization Officer
- · Chief Risk Officer
- · Chief Legal & Compliance Officer
- Chief Technology & Back Office Operations Officer
- Head of Treasury & Capital Markets
- · Head of Commercial Portugal
- Chief People Officer
- · Chief Financial Officer
- · Chief of Staff
- Customer Strategy Director
- Head of Compliance
- Head of Financial Control
- Managing Director
- . The members of the Board of Directors

## Quantitative information on remuneration of "Identified staff" broken down by business area

The following tables show information on current total remuneration as at 31 December 2019 for the single business area that exists in the Group:

Table 26: Total Remuneration of "Identified staff"

Business Area	Number of people	Total remuneration (thousand of €)

## Appendix 6: Corporate governance

The following table shows the composition of the Board of Directors at 31.12.2019

Table 29: Board Members Directorships

Board of Directors	ldentification
Sr. José Luis del Valle Doblado	Chair. Independent member
Sra. Elena Lieskovska	Vicechair, Propietary director
Sr. Peter Ronald Herbert	Independent member
Sra. Geeta Gopalan	Independent member
Sr. Joaquim Josep Saurina Maspoch	independent member
Sr. Krzysztof Drozd	Propietary director
Sr. Miguel Ángel Rodriguez Sola	Executive Director
Sra. Blanca Rivilla Calle	Secretary (no member)

In line with the regulatory requirements and market best practices, the Board has delegated some of its functions in three committees: Audit Committee, Risk Committee and Appointments & Remuneration Committee. Independent members of the Board chair all these three committees and in the Audit Committee and the Risk Committee as well, there must be a majority of independent directors in its composition. Due to the principle of proportionality, the Appointments & Remuneration Committee has not been divided into two

The composition of those three Committees is as follows:

#### 1.- Audit Committee

The Committee meets at least quarterly and its members are:

- Chair: Sr. Joaquim Josep Saurina Maspoch (Independent member)
- Members:
- Sra. Geeta Gopalan (Independent member)
- Sr. Krzysztof Drozd (Propietary member)
- Secretary: Sra. Blanca Rivilla Calle (No member)

#### 2.- Appointments & Remunerations Committee

The Committee meets at least biannually and its members are:

- Chair: Sr. Peter Ronald Herbert (Independent member)
- Members:
- Sra. Geeta Gopalan (Independent member)
- Sr. Krzysztof Drozd (Propietary member)
- Secretary: Sra. Blanca Rivilla Calle (No member)

#### 3.- Risk Committee

The Committee meets at least quarterly and its members are:

- Chair: Sra. Geeta Gopalan (Independent member)
- Members:
- Sr. Peter Ronald Herbert (Independent member)
- Sr. Joaquim Josep Saurina Maspoch (Independent member)
- Secretary: Sra. Blanca Rivilla Calle (No member)

### **Recruitment Policy for selection of Board Members**

The approach to selecting members of the Board seeks to ensure the adequacy of the key members as provided in Law 10/2014 of June 2014 and implemented in Royal Decree 84/2015 of 13 February 2015 so that the suitability of the persons who effectively direct the business of the group is guaranteed.

In particular, the main traits considered in selecting individuals for key positions are their demonstrated integrity, professional background in demanding positions, deep industry knowledge and past successes, along with planning and management skills, the ability to adapt and strategic vision. It is also taken into consideration diversity (including age and nationality) and a healthy gender balance.

The Board of Directors and the Appointments and Remuneration Committee are changed within initial evaluation and continuous monitoring of the suitability of people in key positions in the group, with the support of the structure and organization of the HR Department, as a specialized unit equipped with specific capabilities for selecting personnel and examining professional backgrounds.

### Procedure to evaluate the suitability of directors and key staff

WiZink has a procedure in place to evaluate the suitability of members of its Board of Directors and key management personnel.

The assessment of Directors and key management personnel is entrusted to the Board of Directors, with assistance from the Appointments & Remuneration Committee and the Human Resources Department.

Both directors and all key management personnel must meet the suitability standards, as required by regulatory requirements and EBA Guidelines. Furthermore, they must act consistently with WiZink's corporate values. These include amongst others: disclosure, integrity, respect and openness, collaboration, self-achievement and commitment.

In addition to this, they must have a strategic vision (in line with their responsibilities) and bring relevant historical experience in senior positions, thorough knowledge of the sector as well as planning, management and flexibility skills.

## Diversity policy in selecting members of the management body

WiZink considers that diversity is a core value of the company that is an instrument of value creation. The bank encourages it amongst all its teams. This includes all dimensions such as age, nationality, experience or varying knowledge.

One of the bank's highlights is a balanced representation of gender on its executive team. Half of the members of the Executive Committee are women (50%).

Furthermore, the company counts with an equality policy and promotes equivalent remuneration between men and women. The salary difference that appears in relation to the salaries of men and women is caused by the diversity of populations and functions in WiZink, as the most operational functions (Collections and Operations), that are subject to lower remunerations, have a majority of female population.

## Equality programmes, measures adopted to promote employment, protocols to prevent sexual harassment and sex discrimination

WiZink Bank has various Equality Programmes in place which will be aligned in a near future. Similarly, Iberalbión is finalising negotiations for a new Equality Programme with its workers' representatives that has been put in place in 2019. Different measures are in place at all levels providing for flexibility and balance of personal and family life, specifically focusing on maternity and paternity leave. Finally, there are Action Protocols in place to cover any paternial mobbing (sexual or otherwise).

## Appendix 7: CRR mapping

## Glossary

Advanced Internal Rating Based (AIRB) approach	A CRD IV approach for measuring exposure to retail credit risks. The method of calculating credit risk capital requirements uses internal PD, LGD and EAD models. AIRB approaches may only be used with Bank of Spain permission.	
Additional Tier 1 capital (AT1)	AT1 capital instruments are non-cumulative perpetual securities that contain a specific provision to write down the security or convert it to equity, should the CET1 ratio fall below a specified trigger limit.	
Basel III	Global regulatory standard on Bank Capital Adequacy, Stress Testing and Market and Liquidity Risk proposed by the Basel Committee on Banking Supervision in 2010. See also CRD IV.	
Business risk	Any risk to a firm arising from changes in its business, including the risk that the firm may not be able to execute its business plan and strategy. It also includes risk arising from a firm's remuneration policy.	
Conduct risk	The risk that the Group's operating model, culture or actions result in unfair outcomes for customers.	
Common Equity Tier 1 capital (CET1)	The highest form of regulatory capital under Basel III that comprises common shares issued and related share premium, retained earnings and other reserves excluding the cash flow hedging reserve, less specified regulatory adjustments.	
CET 1 ratio	CET 1 capital expressed as a percentage of total risk-weighted assets.	
CRD IV	In June 2013, the European Commission published legislation for a Capital Requirements Directive (CRD) and Capital Requirements Regulation (CRR) which form the CRD IV package. The package implements the Basel III proposals in addition to the inclusion of new proposals on sanctions for non-compliance with prudential rules, corporate governance and remuneration.	
Credit concentration risk	The risk of losses arising, due to concentrations of exposures from imperfect diversification. This imperfect diversification can arise from the small size of a portfolio, a large number of exposures to specific obligors (single name concentration), or from imperfect diversification with respect to economic sectors or geographical regions.	
Earnings at Risk (EaR)	Approach set out for the quantification of interest rate risk expressed as the impact to forecast net interest income under interest rate sensitivity analysis.	
Funding risk	The inability to raise and maintain sufficient funding in quality and quantity to support the delivery of the business plan.	
Group	WiZink Bank S.A.U. and Aneto S.a.r.I prudential consolidation group	
IFRS 9 Stage 1	A loan that is not credit-impaired on initial recognition and has not experienced a significant increase in credit risk.	
IFRS 9 Stage 2	If a significant increase in credit risk has occurred since initial recognition, the loan is moved to stage 2, but is not yet deemed to be credit-impaired.	
IFRS 9 Stage 3	If the loan is credit-impaired it is moved to stage 3. All expired term, material fraud and operational risk loans are classified as credit-impaired.	
Interest rate risk	The risk of a reduction in the present value of the current balance sheet or earnings as a result of an adverse movement in interest rates.	
Interest rate risk in the banking book (IRRBB)	The risk of a reduction in the present value of the current balance sheet or earnings as a result of an adverse movement in interest rates arising as a consequence of carrying out and supporting core business activities.	
Internal capital adequacy	The part of the Pillar II assessment to be undertaken by an institution. The ICAAP	
assessment process (ICAAP)	allows institutions to assess the level of capital that adequately supports all relevant current and future risks in their business. In undertaking an ICAAP, an institution should be able to ensure that it has appropriate processes in place to ensure compliance with CRD IV.	
Leverage ratio	Total Tier 1 capital expressed as a percentage of Total assets (adjusted in accordance with CRD IV).	
Liquidity coverage ratio (LCR)	Stock of high quality liquid assets as a percentage of expected net cash outflows over the following 30 days according to CRD IV requirements.	
Liquidity risk	The inability to accommodate liability maturities and withdrawals, fund asset growth and otherwise meet the Group's contractual obligations to make payments at they	
Loss Given Default (LGD)	A parameter used to estimate the difference between EAD and the her amount of the expected recovery expressed as a percentage of EAD	
Operational risk	The risk of loss resulting from inadequate or failed internal processes, people and systems or from external events. It also includes legal risk.	

Pillar I	The part of CRD IV that sets out the process by which regulatory capital requirements should be calculated for credit, market and operational risk.
Pillar II	The part of CRD IV that ensures institutions hold adequate capital to support the relevant risks in their business. It also encourages institutions to develop and use enhanced risk management techniques in monitoring and managing their risks.
Pillar II	The part of CRD IV that sets out the information institutions must disclose in relation to their risks, the amount of capital required to absorb them, and their approach to risk management. The aim is to strengthen market discipline.
Repurchase Agreements (Repos)	A form of short-term funding where one party sells a financial asset to another party with an agreement to repurchase at a specific price and date. From the seller's perspective such agreements are repurchase agreements (repos) and from the buyer's reverse repurchase agreements (reverse repos).
Risk appetite	The risk appetite sets limits on the amount and type of risk that the Group is willing to accept or tolerate in order to meet its strategic objectives.
Risk-weighted assets (RWAs)	A measure of a bank's assets adjusted for their associated risks. Risk weightings are established in accordance with CRR rules and are used to assess capital requirements and adequacy under Pillar I.
Securitisation	Securitisation is a process by which a group of assets, usually loans, are aggregated into a pool, which is used to back the issuance of new securities through an SPV.
Standardised approach	In relation to credit risk, a method for calculating credit risk capital requirements using External Credit Assessment Institutions (ECAI) ratings of obligators (where available) and supervisory risk weights. In relation to operational risk, a method of calculating the operational risk capital requirement by the application of a supervisory defined percentage charge to the gross income of specified business lines.
Tier 1 capital	A measure of institutions' financial strength defined by the ECB (European Central Bank). It captures Common Equity Tier 1 capital plus other Tier 1 securities in issue but is subject to deductions including in respect of material holdings in financial companies.
Tier 2 capital	A further component of regulatory capital defined by the ECB for the Group. It comprises eligible collective assessed impairment allowances under CRD IV.
